

ABSTRACT

A printing client management method and a wireless LAN printer in a wireless network is provided. According to the printing client management method for a wireless Local Area Network (LAN), information is extracted from Media Access Control (MAC) frames of the printing clients that associate with a Basic Service Set (BSS) including the wireless LAN printer. A list of the printing clients is formed using MAC addresses of the MAC frames as indexes, and management of printing operations of the printing clients is completed according to the list.
